OpenTechSummit
14 May 2015

Common problems

- ▶ outdated packages
- ▶ version conflicts
- ▶ changes affect all users
- ▶ potentially dangerous
- ▶ trust

Partial solutions

- ▶ **third-party repositories**

EPEL, PPAs, ...

- ▶ **manual compilation**

install to custom prefix, static linking

- ▶ **language-specific package systems**

gem, cabal, pip, cpan, npm ...

- ▶ **build your own system package**

RPM, deb, PKGBUILD, ...

- ▶ **meta package managers**

e.g. fpm generating RPM, deb, gem

- ▶ **giving up**

virtual machines, “app images”, snapshots

Partial solutions

- ▶ **third-party repositories**
EPEL, PPAs, ...
- ▶ **manual compilation**
install to custom prefix, static linking
- ▶ **language-specific package systems**
gem, cabal, pip, cpan, npm ...
- ▶ **build your own system package**

Guix

```
(define hello
  (package
    (name "hello")
    (version "2.8")
    (source (origin
              (method url-fetch)
              (uri (string-append
                    "mirror://gnu/.../hello-" version
                    ".tar.gz"))
              (sha256 (base32 "0wqd...dz6")))))
  (build-system gnu-build-system)
  (synopsis "Hello, GNU world: An example GNU package")
  (description "Produce a friendly greeting.")
  (home-page "http://www.gnu.org/software/hello/")
  (license gpl3+)))
```

Functional package management

- ▶ no **global** values:
/bin, /usr/include, /usr/lib, ...
- ▶ only **declared inputs** are visible
- ▶ **immutable** results:
build outputs can be cached and substituted;
automatic deduplication!
- ▶ no **side effects**:
nothing outside of the cache and internal
state is modified
- ▶ every package output has its **own unique
directory** in the store

build processes
chroot, separate UIDs

Guile

(guix packages)

(guix store)

build daemon

your help needed!

- ▶ version 0.8.2 is **out now**
- ▶ **install the distribution**
- ▶ **use it**, report bugs, add packages
- ▶ help with the **infrastructure** + admin
- ▶ share your **ideas!**
